## AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph on page 11, lines 10 -26 (previously amended) with the following amended paragraph. The changes in this paragraph from its immediate prior version are shown with <u>underlines</u> for added information.

One preferred thermoplastic material, Konduit OTF-212-11 (which has a tensile strength of 7,600 when measured under ASTM method D638), was made into a thermoplastic body and tested for its coefficient of linear thermal expansion by a standard ASTM test method. It was found to have a CLTE in the range of -30 to 30°C of 1.09x10<sup>-5</sup> in/in<sup>o</sup>F in the X direction and 1.26x10<sup>-5</sup> in/in<sup>o</sup>F in both the Y and Z directions, and a CLTE in the range of 100 to 240°C of 1.28x10<sup>-5</sup> in/in<sup>o</sup>F in the X direction and 3.16x10<sup>-5</sup> in/in<sup>o</sup>F in both the Y and Z directions. (Hence, the relevant CLTEs for purposes of defining the invention are 1.09 x 10<sup>-5</sup> in/in<sup>o</sup>F and 1.28 x 10<sup>-5</sup> in/in<sup>9</sup>F.) Another similar material, Konduit PDX -0-988, was found to have a CLTE in the range of -30 to 30°C of 1.1x10<sup>-5</sup> in/in<sup>o</sup>F in the X direction and 1.46x10<sup>-5</sup> in/in<sup>o</sup>F in both the Y and Z directions, and a CLTE in the range of 100 to 240°C of 1.16x10<sup>-5</sup> in/in<sup>o</sup>F in the X direction and 3.4x10<sup>-5</sup> in/in<sup>o</sup>F in both the Y and Z directions. By contrast, a PBS type polymer, (Fortron 4665) was likewise tested. While it had a low CLTE in the range of -30 to 30°C (1.05x10<sup>-5</sup> in/in<sup>o</sup>F in the X direction and 1.33x10<sup>-5</sup> in/in<sup>o</sup>F in both the Y and Z directions), it had a much higher CLTE in the range of 100 to 240°C (1.94x10<sup>-5</sup> in/in<sup>o</sup>F in the X direction and 4.17x10<sup>-5</sup> in/in<sup>o</sup>F in both the Y and Z directions).
